# NEBOSH National Certificate in Construction Safety and Health

Globally recognised health,  
safety and risk qualifications

The NEBOSH National Certificate in Construction Safety and Health is a globally recognised health and safety qualification specifically for the construction industry from an established independent examination board.

'I believe that this qualification is proving invaluable in increasing safety and health performance within the industry. Ultimately, I would like to see this award become the minimum level of qualification required for anyone with responsibility for safety management on construction sites.'

**John Middleton**, *Principal Lecturer, Health, Safety and Supervisory National Construction College*

### What kind of people take the NEBOSH Construction Certificate?

The Construction Certificate is aimed at Supervisors and Managers within the construction industry who are required to ensure that activities under their control are undertaken safely. It is likely to prove useful for those concerned with the management of buildings who may need to ensure that contractors are working safely.

The Construction Certificate is also appropriate for supervisors and managers working in other industries such as utilities, and even broadcasting, where temporary workplaces are a feature of their activities.

### What are the benefits for the organisation?

Many larger construction organisations choose the NEBOSH Construction Certificate as a key part of their supervisory or management development programme. By ensuring that line managers have a sound understanding of the principles of risk management they build an effective safety culture in the company.

Owners or managers of smaller consultancy companies will find the Construction Certificate helps them to meet the requirements of clients and principal contractors when working on other people's premises or sites.

The choice of course format can allow employers to fit training around the needs of the business. Many of NEBOSH's training providers will provide in-company courses that allow for material reflecting the organisation's own systems of work or particular hazards to be included.

### What does the course cover?

It covers a broad range of construction hazards and the means by which they can be controlled. It includes the main legal requirements relating to construction work and enables candidates to undertake effective safety inspections on a construction site.

### Where can I take a course leading to the NEBOSH Construction Certificate?

Details of training providers operating across the UK and overseas are on our website.

These training providers offer courses to fit around your requirements:

- Distance or blended learning
- Day or evening courses over a number of weeks
- Block release or modular courses

### How is the course assessed?

Candidates are assessed by two written examinations and a practical assessment on a construction site. The practical assessment checks your ability to put the knowledge gained during the course into practice.

### How much does it cost?

Course fees are determined by your training provider and vary depending on the format of the course. Please contact providers for details.
